

## WARM WOODS FEATURED IN VIP DENTAL SUITE

From all of us at **Architectural Systems**, please enjoy a New Year filled with the *blessings of health and happiness.*

A recently completed healthcare project includes a VIP suite for patients of a renowned cosmetic dentist in midtown Manhattan. The space, which serves an exclusive clientele of entertainers, personalities, and foreign dignitaries, was designed to ensure a heightened experience with the utmost privacy and care.

To create that sense of privacy, the VIP Suite connects to the doctor's office. This access from the private consultation area into the luxurious patient suite minimizes time spent in the common areas of the office.

In keeping the existing look and feel, wood remained the signature design element in the room.

*"For the VIP suite, we wanted to visually tie it into the Dr.'s executive office, while both adding contemporary aspects and keeping the integrity of the original design. The material selection had to feel upscale. The ASI Hardwood VI in African Sapele was the perfect choice for the floor because we could closely match it to other custom woods that were used in the space. The African Sapele provided us the value-engineered option that also met the aesthetic desired by the client,"*  
Bradley Rim, Director of Interiors, Andrew Fredman Architect, LLC, New York
